

# VITAE SUITE ARCHITECTURE

VITAE Suite is a comprehensive and configurable solution supporting health and elder care. The suite contains a wide range of functionality for the various tasks performed by the employees involved in these services.

The underlying architecture of VITAE Suite provides a large number of services that may be available to a user. These services are organized in a Service Oriented Architecture (SOA) to ensure that the data in the system is consistent in all available services.

The client part of most services is provided as modules for the Open Clinical Workspace (OCW) portal to provide one single application containing all services needed by a user. The OCW portal integrates the modules according to the HL7/CCOW standard. Dedicated applications are available to users that perform highly specialized tasks.

The overall architecture of the suite is depicted below.

The suite combines several separate systems into one coherent suite of systems, which makes it possible to use services from the systems that are best suited for it. The systems in the suite keeps data consistent using the integration services.

The protocols used for the integration services are isolated from the systems, and are replaceable. An number of standards protocols are used, such as HL7, OIOXML, and MedCom.

The systems in the suite is hosted either on either local or central servers. The architecture even makes it possible to host some of the systems on local servers and other on central servers.

**About CSC Scandihealth A/S**

CSC Scandihealth develops and supplies electronic health records and solutions for hospital information, clinical quality, care, and student administration. We put our health professional knowledge and competence to work in support of the development of the coherent healthcare society.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how within the healthcare sector and an in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination providing us with a sound basis for further developing and delivering healthcare IT solutions that allow our customers more time to concentrate on their own core services.

CSC Scandihealth is the Nordic competence centre for healthcare solutions. CSC Scandihealth is a fully owned subsidiary of CSC.
