

FACTS ABOUT CLINICAL SUITE

Overview, continuity – simple workflows

CLINICAL SUITE – MODULES

Clinical Suite is a multidisciplinary electronic patient record which covers the entire hospital across professional groups, departments, specialties and organisation.

Clinical Suite offers you a flexible future-proof solution consisting of a number of modules that provide overview, insight, flexibility and quality – all in one place.

Clinical Suite is part of a total integrated solution together with the hospital's existing IT systems.

CLINICAL PORTAL

The clinical portal constitutes the framework for a coherent clinical workspace with easy access to all the related modules. The portal offers unambiguous and visible context sharing across all open modules. Single sign-on facilities enable the user to work seamlessly in the various modules, and to jump to external modules and web sites via links while retaining the current user and patient.

CLINICAL OVERVIEW

This module ensures a unique overview of the patient's record. The module offers an integrated graphical presentation of data from Clinical Suite as well as external systems to suit the needs of the user – whether according to subject, chronologically or tailored to a specific work situation. The task list is an efficient tool for ensuring overview of pending tasks and their priority.

CLINICAL PROCESS

The clinical process module supports documentation, decision support, interdisciplinary and team-oriented co-operation, as well as follow-up across the organisation. The clinical process module offers unique support of the clinical work thanks to the flexible setting of record structure, note templates, clinical overviews as well as diagnosis, problem and planning contexts.

PATIENT ADMINISTRATION

This module handles all patient administrative tasks from the patient is referred till the patient is discharged – across hospitals, departments and specialties. Effective and efficient overviews support planning and prioritisation of outpatient clinic patients as well as ward patients. Moreover, the module ensures that data are collected and processed for the purpose of reporting, billing and quality control.

ORDER AND RESULT

The order and result module handles template-based ordering of services and receipt of results internally in the system or via integrations to third-party systems. The module also comprises an advanced functionality that supports the planning of an optimum course of treatment and care for the patient involving multiple service departments.

BOOKING

The booking module handles scheduling of consultations, training, surgery, etc. The use of flexible calendar templates that can be freely defined ensures fast booking, improved planning and optimum use of human and material resources. For each booking you can follow and register the patient from the time he/she is registered at the reception until the investigation has been completed.

MEDICINE

The medicine module ensures high-quality medication administration and reduces the risk of medication errors. Throughout the entire medication administration process, the module offers an overview of medicine, orders, administration and dispensing, and all relevant employees have fast and simple access to the necessary information. Medicine ordering will be easy, fast and safe thanks to, among other things, standard orders and regimes. All actions and all changes of medication information will be documented in the system.

About

CSC Scandihealth A/S

CSC Scandihealth A/S develops and supplies electronic health records and solutions for hospital information, clinical quality, care, health insurance, and student administration. We put our health professional knowledge and competence to work in support of the development of an integrated healthcare community.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how about the healthcare sector, and in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination that provides us with a sound basis for further development and delivery of healthcare IT solutions that allow our customers more time to concentrate on their own core services. CSC Scandihealth is owned by CSC and is CSC's Nordic competence centre for healthcare solutions.

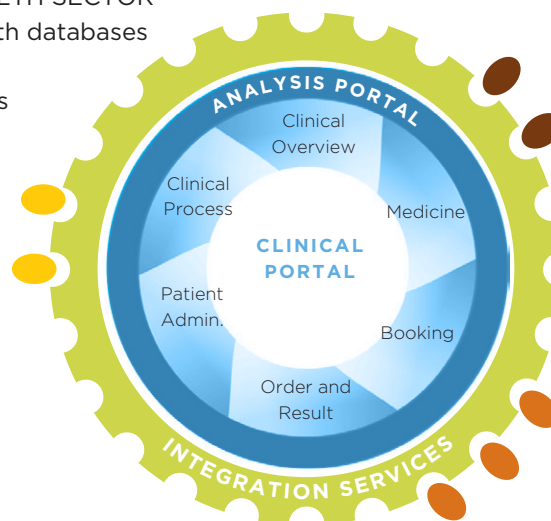

CSC Scandihealth A/S

P.O. Pedersens Vej 2
8200 Århus N
Denmark
Fax +45 3614 7324

- Provides an overview of the patient's medical history and current status
- Reuses data so information only has to be registered once
- Minimises errors thanks to the use of standard clinical pathways, customisable workflows and alerts
- Ensures that overviews, plans and templates are freely configurable so that they support the specific needs of the organisation and ensure recognisability, which eases the process of shifting to a new record – a new system
- Enables the hospital to modify and adapt key elements, such as record structure, organisational structure and overviews
- Enables the hospital to tailor the system to current guidelines and incorporate experience and guidelines as best practice
- Ensures scalability and ongoing seamless coupling of new modules, optimising the return on the investment
- Ensures access to detailed clinical data for one patient only at a time
- Handles shifting to another patient in all related modules at the same time
- Integrates with, for example:
 - Patient administrative systems
 - Medicine systems
 - Care systems
 - Laboratory and x-ray systems
 - Microbiology and pathology systems
 - Pharmacy systems
 - National health databases (reporting)
- Uses role-based security and organisational affiliation
- Supports formal as well as informal organisation in patient treatment via a flexible organisation model
- Ensures full traceability and history of modifications and logging of any display of data

HEALTH AUTHORITIES AND PRIMARY HEALTH SECTOR

- National health databases
- Reporting
- Care solutions
- Referrals

FINANCES AND RESOURCES
