

CLINICAL SUITE

OVERVIEW, CONTINUITY - SIMPLE WORKFLOWS

FOR HOSPITAL
CLINICIANS

CSC

OVERVIEW

IN THE BUSY WORKING ENVIRONMENT

HOSPITAL SECURITY AND QUALITY REQUIREMENTS ARE EXCEPTIONALLY HIGH. CLINICIANS MUST ENSURE PROPER PATIENT TREATMENT WHILE AT THE SAME TIME DEMONSTRATING OVERVIEW, INSIGHT AND EFFICIENCY. TO DO THIS, YOU NEED THE RIGHT TOOLS.

The electronic patient record, Clinical Suite, offers a single point of access to all clinical information, enabling you to make the right decisions.

Hospital staff is the source of a wealth of clinical expertise, knowledge and experience. This knowledge is stored in a wide variety of systems and not least in the clinician's memory. Clinical Suite collects, organises and activates the hospital's total clinical know-how, making it available at all times. The single point of access to patient data offers structure and continuity in the often staggering volumes of information found in patient records.

Thus Clinical Suite is not just another IT system, rather it is a general solution collecting and presenting all the knowledge available about the patient. Patient data is presented in a single screen related to a specific clinical work routine, for example ward rounds, enabling you to form an overall picture and draw conclusions based on figures, text and graphics.

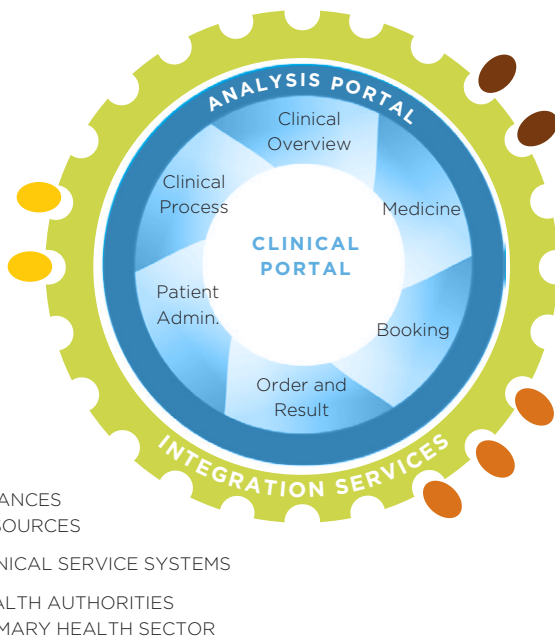

For example, Clinical Suite can be integrated with laboratory systems, x-ray systems, patient administrative and billing systems. Also, it enables integration with national health databases, municipal care systems and many others.

Consequently, whether you are a doctor, nurse, therapist, care worker or any other kind of practitioner, you have access to all relevant information in the patient's record. And you can always be sure that the next practitioner the patient meets during his/her course of treatment and care will be up-to-date with the latest information. No lost time, and you do not have to get up to go looking for the patient's record - it is always within easy reach on the nearest computer.

MULTIPLE SYSTEMS – SINGLE POINT OF ACCESS

STRUCTURE AND OVERVIEW

EASY, FAST AND SAFE

When you register new information you will be assisted and supported by built-in checklists, templates, standard clinical pathways and classifications – national as well as local. This provides for easy and secure registration and minimises the number of duplicate registrations and the risk of inaccurate information. The result is security for you as a clinician – and security for the patient.

Once data has been registered, it will be available for all practitioners, provided that they have access to that particular part of the record. The information available in the records makes drafting letters and other written information to the patients an easy task.

The phased implementation process will incorporate the hospital's needs, requirements and experiences, and include performance management in close collaboration with hospital management, clinical staff and IT managers. All experiences and proven enhancements will be incorporated during implementation on an ongoing basis.

Clinical Suite offers you a flexible and future-proof solution which provides you with overview, insight and continuity – all in one place.

WHAT IS CLINICAL SUITE?

Clinical Suite is an electronic patient record which covers the entire hospitals across professional groups, departments, specialties and organisation. Clinicians are able to form an overview of the clinical activities and related documentation. They can share information across the organisation and coordinate their efforts in collaborative teams. Among other things, Clinical Suite comprises:

- Documentation, information and communication
- Planning and management of the clinical process via decision support, plans, check points, alerts and warnings
- Collection and processing of data for reporting, administrative and quality control purposes

Clinical Suite is developed by clinicians and IT professionals working together, and this very combination of IT expertise and health professional knowledge is what makes the design and functionality of Clinical Suite so unique. Clinicians are presented with a total overview of the patient's course of treatment and care from referral and admission till the patient is discharged.

About CSC Scandihealth A/S

CSC Scandihealth A/S develops and supplies electronic health records and solutions for hospital information, clinical quality, care, health insurance, and student administration. We put our health professional knowledge and competence to work in support of the development of an integrated healthcare community.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how about the healthcare sector, and in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination that provides us with a sound basis for further development and delivery of healthcare IT solutions that allow our customers more time to concentrate on their own core services. CSC Scandihealth is owned by CSC and is CSC's Nordic competence centre for healthcare solutions.
