FOR HOSPITAL  
DECISION MAKERS

# CLINICAL SUITE

OVERVIEW, CONTINUITY - SIMPLE WORKFLOWS

# OVERVIEW AND PERFORMANCE

## AT THE HOSPITAL

RUNNING A HOSPITAL REQUIRES THAT HOSPITAL MANAGEMENT AND DECISIONS MAKERS MAINTAIN THE OVERALL PICTURE. AND ABOVE ALL USE THE RIGHT IT TOOLS. THE ELECTRONIC PATIENT RECORD, CLINICAL SUITE, OFFERS THE MANAGEMENT AGGREGATED DATA FOR CONTROL AND PRIORITISATION OF DAILY OPERATIONS AS WELL AS LONG-TERM STRATEGIC PLANNING.

Clinical Suite collects, organises and activates the hospital's total clinical know-how and best practices making it available at all times. A single and structured point of access to patient and process data enhances the value and utilisation of hospital resources and existing IT solutions.

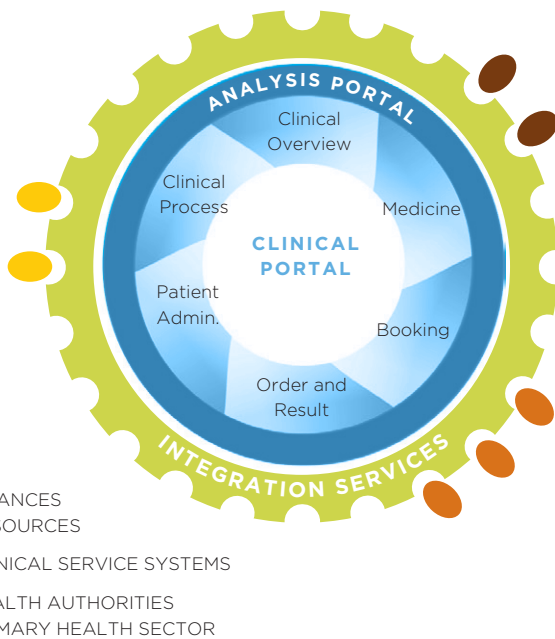

Easy access to relevant patient data streamlines workflows and enhances the quality of treatment. The risk of errors and duplicate registration is reduced, and the quality is enhanced in terms of diagnosis, treatment processes and collaboration.

Clinical Suite provides an overview of all the tasks to be solved during the patient's course of treatment and care with well-defined and efficient delegation of responsibility and control. This facilitates efficient workflows and clinical pathways with optimal utilisation of resources. Consistent planning of the clinical pathway reduces the time lost and enables the patient to quickly move on to the next phase in the process. The result is improved patient flow - along with high quality and security.

Patients experience a more coherent course of treatment and a very high quality of treatment. All practitioners involved are always fully up-to-date about the patient's status and are able to provide clear information about, for example, test results and the further treatment or care process at any time, thus making the patient feel safe.

Hospital staff also stands to gain considerable benefits in the form of increased clinical overview. They have 24/7 access to

# OPTIMISED DECISION SUPPORT CONTROL AND PRIORITISATION OVERVIEW AND STRUCTURE

all relevant patient information and are thus able to work more effectively and structured. As a result, they can concentrate on their core service: providing optimum patient treatment. This generates increased job satisfaction, motivation and commitment and makes the hospital a great place to work.

Clinical Suite offers a great potential for standards-based integration with the hospital's other solutions and thus optimum utilisation of existing stand-alone IT systems. For example, Clinical Suite can be integrated with laboratory systems, x-ray systems and patient administrative systems. Also, it enables integration with national health databases, municipal care systems and many others.

The phased implementation process will incorporate the hospital's needs, requirements and experiences, and include performance management in close collaboration with hospital management, clinical staff and IT managers. All experiences and proven enhancements will be incorporated during implementation on an ongoing basis.

Clinical Suite offers you a flexible and future-proof solution which provides you with overview, insight and continuity – all in one place.

## WHAT IS CLINICAL SUITE?

Clinical Suite is an electronic patient record which covers the entire hospital across professional groups, departments, specialties and organisation.

Clinical Suite supports all patient administrative tasks from referral and admission until the patient is discharged, and can be integrated with the hospital's other IT systems. The day-to-day work, efficiency and commitment of the health professional staff are greatly increased, and the patient experiences faster and better treatment.

The management obtains aggregate and structured data for the purpose of reporting and quality measurement as well as operations and control.

Clinical Suite is developed by clinicians and IT professionals working together, and this very combination of IT expertise and health professional knowledge is what makes the design and functionality of Clinical Suite so unique.

### **About CSC Scandihealth A/S**

CSC Scandihealth A/S develops and supplies electronic health records and solutions for hospital information, clinical quality, care, health insurance, and student administration. We put our health professional knowledge and competence to work in support of the development of an integrated healthcare community.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how about the healthcare sector, and in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination that provides us with a sound basis for further development and delivery of healthcare IT solutions that allow our customers more time to concentrate on their own core services. CSC Scandihealth is owned by CSC and is CSC's Nordic competence centre for healthcare solutions.
