

ONE CLIENT ONE RECORD

Targeted needs assessment,
documentation and communication.
A common workspace with focus on
the client

BENEFITS

Decision support

Based on common
data

Uniform
documentation

Easy and fast
communication
across sectors

Enhanced focus

Always up-to-date

VITAE Care Record is part of the coherent healthcare society across sectors.

In addition to being a tool for needs assessment and documentation, VITAE Care Record is a tool for communication across professional groups and sectors. With focus on the client, VITAE Care Record provides the setting for a common workspace, no matter if it is used by the municipality's assessment officer, municipal home care services, municipal nursing homes or private providers - one client, one record.

DECISION SUPPORT

VITAE Care Record can be set up in accordance with the municipality's own quality standards, as decision support for e.g. the ordering unit.

Standards within services, focus areas, letters and special overviews help enhancing workflows and create uniform services for the individual client.

COMMON DATA

VITAE Care Record supports ongoing development of multidisciplinary collaboration across the healthcare sector and supports international standards.

UNIFORM DOCUMENTATION

In VITAE Care Record documentation can be structured to ensure uniform access to the clients' data. This increases the individual employee's ability to find and update his/her knowledge about the clients.

Easy access to documentation of targeted focus areas across professional boundaries enhances the quality of the collective client-oriented initiative.

FAST COMMUNICATION ACROSS SECTORS

VITAE Care Record ensures fast and secure communication between the municipality and its business partners. Thanks to letter messages it is possible to communicate directly with general practitioners, hospitals, pharmacies, medical specialists and many more.

Communication across sectors strengthens the collective client-oriented initiative. For example, the municipality can send the latest functional assessment, documentation on targeted initiatives or the latest notes to the hospital department the moment the client is admitted to the hospital.

IMPROVED INTERNAL COMMUNICATION

The built-in communication systems let you exchange relevant information about the client with internal business partners. Either across (professional) groups or within a group.

ENHANCED FOCUS

In addition to documentation that is always available in the electronic record, VITAE Care Record offers a number of practical help functions.

For example, you can receive automatic reminders of when to evaluate a focus area, which contributes towards updated and targeted client-oriented initiatives. In

addition, you can be notified that services have to be re-assessed, either in relation to current legislation or based on the client's individual needs.

ALWAYS UP-TO-DATE

VITAE Care Record can also be used as a mobile solution, either as a complete online solution with full access to all records or as an offline solution with access to selected data. In that way you will be able to look up and register changes in the care record, for example in connection with an assessment visit to the client. The offline solution is designed to ensure that data is secure, even when there is no mobile phone coverage.

The online version of the VITAE Care PDA module provides care staff with access to demographic information, medication, notes, etc.

CSC Scandihealth A/S

CSC Scandihealth develops and supplies electronic health records and solutions for hospital information, clinical quality, care, health insurance, and student administration. We put our health professional knowledge and competence to work in support of the development of an integrated healthcare community.

We have supplied healthcare IT to Danish hospitals since 1972. We have created an unrivalled product range, a unique pool of know-how about the healthcare sector, and in-depth knowledge of the world of our customers.

Our employees are primarily working with the development and supply of healthcare IT. The knowledge and expertise of our employees encompass technology as well as healthcare, a combination that provides us with a sound basis for further development and delivery of healthcare IT solutions that allow our customers more time to concentrate on their own core services.

CSC Scandihealth is owned by CSC and is CSC's Nordic competence centre for healthcare solutions.
